GovCMS 🍰

WEEK ONLINE

FUNctionality

Please wait and mute your mic we will start at approximately 1:05 pm (AEDT)

FUNctionality | Welcome

#	Agenda Item	Length (m)
1	Welcome	10
2	Akamai Purge Services	15
3	New feature: Role Delegation	20
4	Questions	5
5	Closing remarks	5

Akamai Purge Services

I will now hand over to Doug Courtney…

Role Delegation

Environments in the Dashboard

Advanced Tasks in the Dashboard

Role Delegation

- Role Delegation allows Site Administrators to grant specific roles to users within a site

- While Site Administrators have been able to previously assign roles, it doesn't mean all roles have been visible or hasn't been convenient to action when managing a site

- Aligns to our Drupal 7 distribution with Role Delegation now in our 9 distribution

- Role Delegation gives more flexibility for managing users in a website, removing another bottleneck in process for those using GovCMS and our Service Desk

Role Delegation

- Already have Module Permissions enabled? Then you (as a Site Administrator) can enable Role Delegation yourself

- Module Permissions gives control over some modules and their configuration within a SaaS site, in a safe and secure manner

Role Delegation

- Available now in the GovCMS distribution – first added in our 2.10.0 release (2 March 2022)

- Don't have Module Permissions? Request it now via the GovCMS Service Desk – https://www.govcms.support

- Role Delegation on Drupal.org - https://www.drupal.org/project/role_delegation
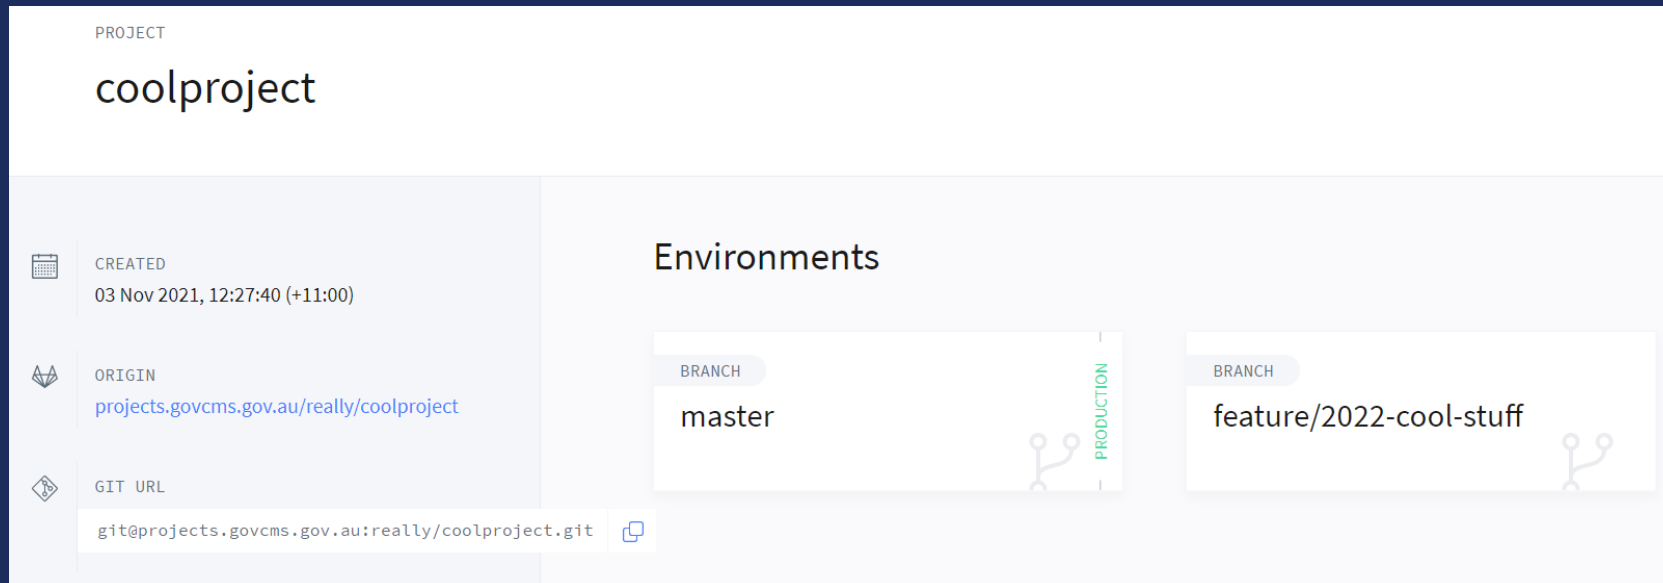

Environments in the Dashboard

- Environments within GovCMS are used within a GovCMS project for a mix of reasons
  - Development cycle
  - "Pre-prod" for testing content and design solutions with internal customers
  - Staging for new features
  - Testing and designing functionality

- Each project allows for up to 5 environments, plus the Master environment which usually serves out the Live site

- Some GovCMS customers have opted for more environments as part of their hosting solution
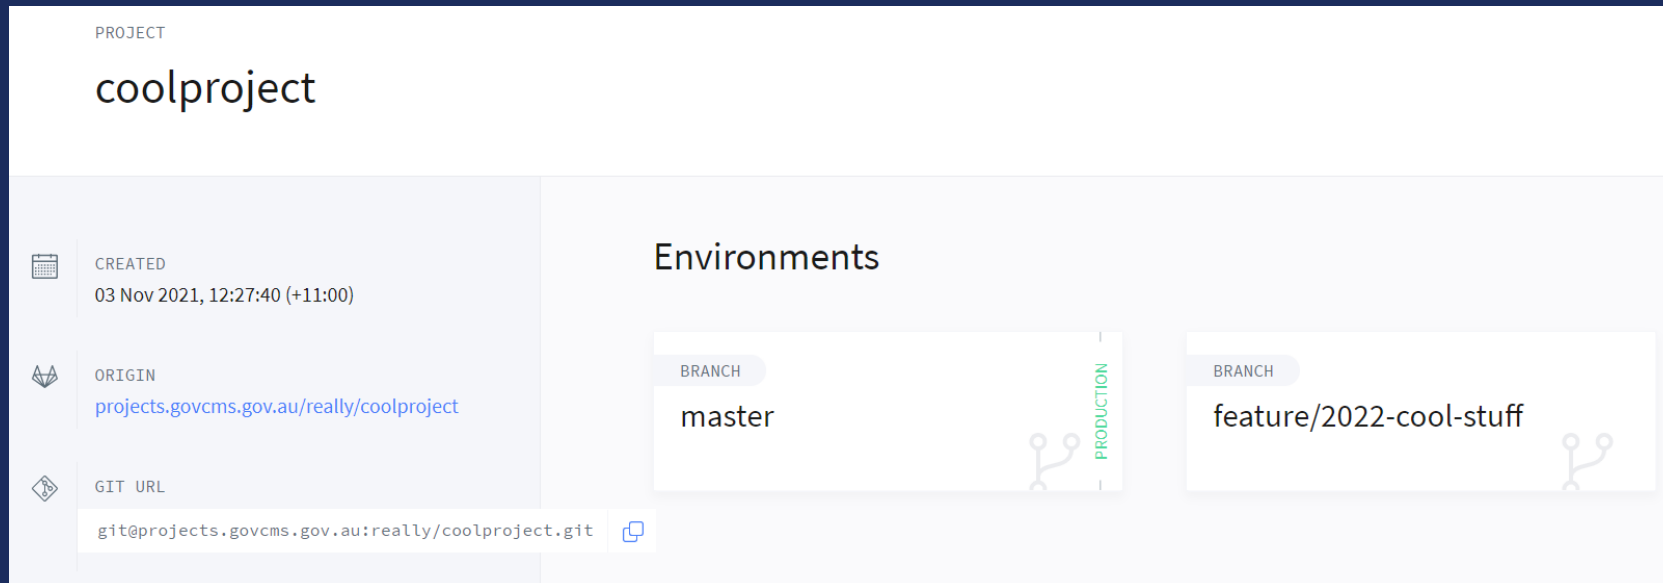

Environments in the Dashboard

- The Dashboard at https://dashboard.govcms.gov.au lists projects you have access to and their subsequent environments

- A Master environment is always shown within each project, and depending on work being undertaken, may have more

Environments in the Dashboard

- The Dashboard at https://dashboard.govcms.gov.au lists projects you have access to and their subsequent environments

- A Master environment is always shown within each project, and depending on work being undertaken, may have more
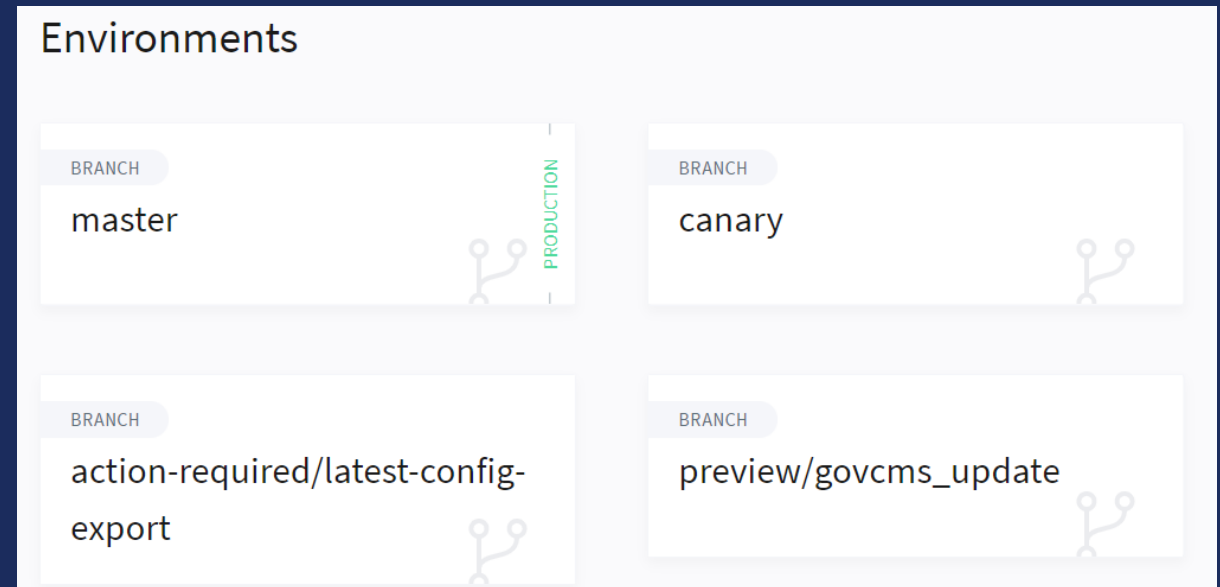

Environments in the Dashboard

Similar to our Drupal 8 to 9 upgrade, we deploy additional environments to your project as needed for certain activities. We have rhyme and reason for all

- For major upgrades, such as our recent 9.3 release, we will create **preview/govcms_update**

- Those with "canaries" will also have a **canary** listed

- Those with configuration import/export on, will also have a **latest-config-export** listed

- These don't count towards your number of environments

Advanced Tasks in Dashboard

- For those familiar with the GovCMS Dashboard https://dashboard.govcms.gov.au

- Currently there is a set of list of Tasks that can be run at an environment level

- This list of Tasks and some functionality is currently limited and not always conducive to a great developer experience

Advanced Tasks in Dashboard

Within the Dashboard, in the Master Environment, selecting Tasks from the left hand menu:
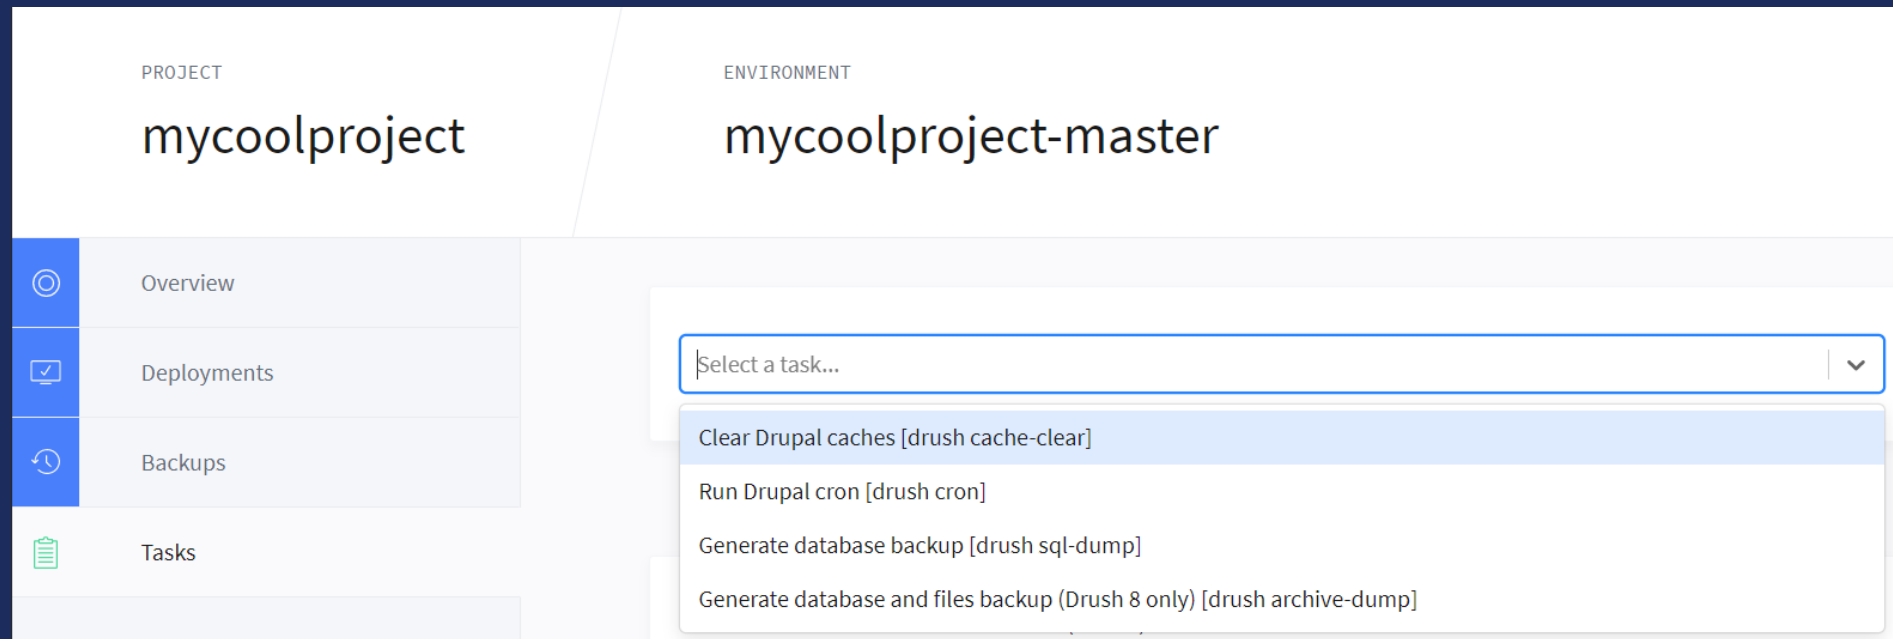

Advanced Tasks in Dashboard

- We're now at a point where we want input from the community

- What sort of Tasks would benefit developers? What are pain points here that could be improved/overcome with additional tasks?

- We would love an overview of a task's purpose, need, benefit and if you have any examples of how you do those tasks now, will help us shape Advanced Tasks

- Let us know
  - GovCMS Backlog - https://github.com/govCMS/GovCMS/issues
  - GovCMS Service Desk – https://www.govcms.support

Any questions?

Raise your hand
