

# govCMS Distribution 7.x-2.9 Release Notes

Version: 1.0

## Drupal update

govCMS has been updated to Drupal 7.51, the latest version.

This update has added a new permission item for *Site Builder* and *Site Editor* roles (*Administer fields*), which gives customers additional flexibility in building and managing their websites.

## Security updates

The govCMS distribution has received a minor security updates as part of this update:

- Enabled *govCMS Account Security* module as standard. This module:
  - solves users not being able to request password reset emails when their account is marked as blocked; and
  - hides user profiles by default.

## Issue resolutions

A couple of issues, or bugs, have been identified and resolved in this release, including:

- The double overlay issue with the *Media Browser* interface where a duplicate window would appear is now resolved;
- A number of improvements for developers setting up govCMS in a local environment have been included. More information can be found on the [Github readme file](#) under the *Installation from source* heading.

## New functionality

Throughout the build of this release, we've listened to requirements and feedback from our customers, and are proud to announce the following inclusions:

- *Google Site Search* is an option alongside existing *Funnelback*, *Apache Solr* and built-in *Drupal* search integrations;
- *Hierarchical Select* simplifies the process of selecting menu locations when creating and modifying pages;
- *Multipath Autocomplete* improves the menu creation process when adding menu items via *Structure / Menus*, by providing autocomplete functionality of existing content on your website;
- *Scheduler Workbench* has been updated to enable scheduled publishing of revisions for content items.

## Minor updates

A few modules were updated to resolve mostly minor bug-fixes, and to keep synchronised with their releases:

- *Minisite* module upgraded to 7.x-1.0-alpha2;
- *govCMS CKAN* module upgraded to 7.x-1.1;
- *Twitter Block* module upgraded to 7.x-2.3;
- *ctools* module upgraded to 7.x-1.10;
- *File Entity* module upgraded to 7.x-2.0-beta3;
- *Pathauto* module upgraded to 7.x-1.3;
- Google Analytics Reports upgraded to 7.x-3.1.
